

Classroom News

Class Name: Totnes

Term : Summer 1 2019

What we have been learning

Some photos of our fantastic work this half term.

It has been a short term but the Class have made every day count and we have experienced so much in class!

In class, we have started a new topic (The Rainforest) and we are specifically looking at the island of Madagascar. We have had lots of fun undertaking our own research all about the huge variety of wildlife found in the rainforests. This has been hugely beneficial to all of the students as they have had to take even more ownership over the different species and they continue to improve their reading skills when using a laptop/iPad. As well as this, we have compared Madagascar to Newbury and explored all of the differences and similarities. It definitely surprised the class with how the people of Newbury and Madagascar take part in similar everyday tasks!!

Recently, we have started to look at measurements in more detail and we are using different measuring tools to measure a range of real life objects and how it could be used outside of school.

After Totnes Class Café's resounding success last term, we decided to start it up again and offer hot drinks and a biscuit to members of staff. However, we have made the price a little cheaper to ensure customers are still willing to come. This has helped the class with their ability to communicate with a range of different adults and they are having more opportunities to handle money and work out correct change.

We are all really looking forward to Summer Term 2 and having a fun-packed activity week!

Have a lovely and well deserved half term break!
